Repost of Txmmy's intro to GamerOS Windows 10:

Aug 13, 2021

So after about a year with NTLite and a lot of experimentation and testing I've create this for all game enthusiasts, it is basic windows meant for gaming, I myself mainly play and tested this with cs go, I hope that I've maintained other features needed for gaming and such programs that one would use well playing a game now it may not be the best because I don't claim to know everything and would love others input but alas I'll shut up and give it to you, and remember always GLHF

Im hoping that not many people wind up with issues, if you have any suggestions or feedback I am open to all

Instructions:

Fully Update Your MSDN Obtained Iso

Download Preset for Chosen Operating System

Create Iso Using Preset File (Do not edit them unless you know what you are doing)

Install Windows as Normal

Update System Drivers

Connect to Ethernet

Play Games

After each update that reverses the changes made, use the latest preset to maintain the optimal os experience

For backup functions, I suggest Macrium Reflect Free, Ive been thru a few backup programs over the years and so far I've loved this one, saves alot of time doing testing and then restoring, and can be added to a winPE iso and used to recover from complete os failure in like a minute

Note:

GamerOS requires a licensed copy of NTLite to fully unlock all the component removals.

If you're using the free edition, you won't be able to use most of the discussed features. But can learn a lot about NTLite's features by reading the questions & answers, in case you decide to upgrade to a Home License.

A copy of Txmmy's last official release "GamerOS 10 Final.zip" is available below.

This preset is no longer supported by Txmmy.

Change Log for the revised versions for GamerOS (supports W10 22H2, W11 23H2, and W11 24H2)

Aug 14, 2024

1. The updated presets restore the previously missing **Bluetooth**, **Edge (Legacy)**, **Microsoft Store**, **MS Accounts**, and **Wi-Fi** features.

For many gamers, a commonly asked problem was Txmmy's preset disabled support for Bluetooth & Wi-Fi devices, and paid Xbox Games from the Microsoft Store. Adobe installers and some 3rd-party apps would fail to download files without **Edge (Legacy)**.

If you don't want these restored features, then copy the following lines to your preset:

Code:

```
<c>hwsupport_bluetooth 'Bluetooth'</c>  
<c>Microsoft.MicrosoftEdge 'Microsoft Edge (Legacy)'</c>  
<c>wlan</c>
```

Code:

```
<c>efsfeature 'Encrypting File System (EFS) - Feature'</c>  
<c>Microsoft.StorePurchaseApp 'Store Experience Host'</c>  
<c>Microsoft.WindowsStore 'Windows Store'</c>  
<c>passport 'Microsoft Passport'</c>
```

2. New component removals include:

Code:

```
<c>netbios 'NetBIOS over TCP transport'</c>  
<c>nfsclient 'NFS Administrative Tools'</c>  
<c>openssh</c>  
<c>projfs 'Projected File System (ProjFS)'</c>  
<c>proximity 'Proximity - Wi-Fi Direct'</c>  
<c>refs 'Resilient File System (ReFS)'</c>
```

```
<c>simpletcp 'Simple TCP/IP services'</c>  
<c>superfetch</c>  
<c>telnetclient 'Telnet Client'</c>  
<c>tftpc client 'TFTP client'</c>  
<c>vcmcodecs 'Video Compression Manager (VCM) codecs'</c>  
<c>wallet 'Wallet Service'</c>  
<c>webview2core 'WebView2 Runtime (Core)'</c>
```

3. For both W11 presets, UScheduler tasks to update **DevHome**, **Edge**, and **Outlook** apps are disabled, to prevent them from re-installing during OOBE.

4. W11 24H2 preset removes the new inbox apps for **DevHome**, **Copilot**, **CrossDevice** (Phone Link), and **Start Experiences**.

Code:

```
<c>microsoft.windows.devhome 'DevHome'</c>  
<c>microsoftwindows.client.aix 'Windows Copilot (Windows F<br><c>microsoftwindows.crossdevice 'MicrosoftCrossDevice'</c>  
<c>startexperiencesapp 'Start Experiences (InboxApp)'</c>
```

How I do re-enable a missing Windows feature?

Open your saved preset file in Notepad. Find the listed lines below, and delete

them from your preset.

For **VPN** support:

Code:

```
<c>eaphost 'Extensible Authentication Protocol (EAP)'\</c>  
<c>vpn 'Virtual Private Network (VPN) support'\</c>
```

For **Windows Hello** facial & fingerprint recognition, and PIN-based passwords:

Code:

```
<c>microsoft.bioenrollment 'BioEnrollment'\</c>
```

Removed **User Choice Protection Driver** (UCPD) from W11 23H2 & 24H2.

UCPD blocks users from making specific reg key updates, including those that manage Taskbar Widget settings. And also prevents 3rd-party apps from making new changes to the current list of **File Type Associations** (FTA's) that bind specific file extensions to a default app.
